- 12v 48mm Halospot GY4 20w Tungsten Halogen
- 12v 50mm LED GU5,3 4-10w LED

**Installation notes**

- 1 **Connection** - Feed mains voltage cable to required location.
- 2 **Lenses** – Sandblasted lenses lift and diffuse the light, giving a full wash effect. Softening lenses soften the edge of the scallop, maintaining some definition. These are added where appropriate.
- 3 **Lamps** – With a John Cullen Design the lamp beam angles and lens specification are provided on the drawings and should be installed as shown.
- 4 **Temperature** – Light fitting becomes hot to the touch in operation and should not come into contact with fabrics, furniture or soft furnishings. Fittings used at low level become hot to the touch and consideration must be given to a child touching them or objects left on them when off, and not removed before switching back on.
- 5 **5 amp circuit** – Electrician to remove 13 amp plug supplied and replace with a 5 amp plug where required.

**PLEASE NOTE:-**These notes are for guidance only. John Cullen accepts no responsibility for any installation using the above notes and the final decision on installation remains with the installer.

**Product codes**

- G341001 White
- G341006 Bronze
- G341010 Silver grey
- G341012 Gun metal

**Accessories**

- SG50** Sandblasted glass to provide an even wash without scallop.
  - HC50** Honeycomb louvre for extra low glare.
  - SL50** Lens for softening the scallop edge.
  - LL50** Spreader lens to elongate the beam width.
  - UV50** Ultra violet lens to limit UV.
- Coloured glass lenses available on request.
